

Bifocal Lenses

iLENSIFY Bifocal Lenses

Clear Vision at Two Distances, iLENSIFY Bifocal Lenses are part of the multifocal lens category, similar to progressive lenses. They are designed to provide visual clarity at both near and far distances. What makes them unique is the distinct segment in the lower part of the lens, which separates the reading zone from the distance zone. This allows quick and defined transitions between viewing areas. Whether you're reading a book, working on a computer or driving, iLENSIFY bifocals offer a safe and reliable visual experience by eliminating blur and confusion between distances.

Benefits of iLENSIFY Bifocal Lenses

- ✓ Clear vision for both near and far without switching glasses
- ✓ Distinct reading segment for easy focus on close-up tasks
- ✓ Easy and natural adaptation thanks to the clearly separated viewing zones
- ✓ Thin and lightweight material for all-day comfort
- ✓ SHMC Coating and UV420 Protection for durability, low reflections and cleaner lenses

Who Are Bifocal Lenses Suitable For

- People who need correction for both near and distance vision
- Office workers, frequent readers and professionals switching between print and digital
- Drivers and daily users who benefit from distinct visual zones
- Those who prefer a classic visible split instead of progressive lenses

SHMC and UV420 (Blue Fortify) coating	✓	✗

A Practical Solution for Dual Vision Needs

iLENSIFY Bifocal Lenses are ideal for those who don't need multiple focus zones but want a clear separation between reading and distance vision. With a practical design, smart protection and modern aesthetics, they're the perfect everyday choice for home, work or life on the move.

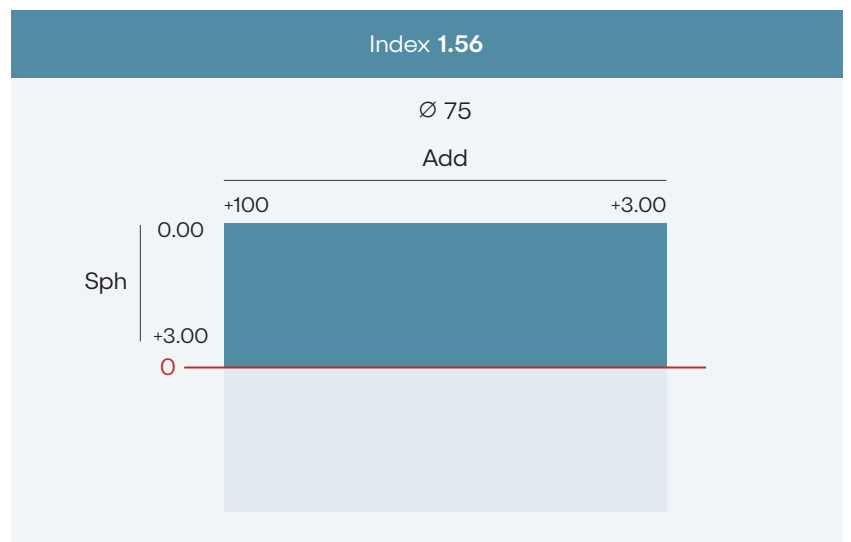

Two Zones.
One Clear Vision.

Availability

iLENSIFY Bifocal Lenses are available in both coated and uncoated versions,

Allowing you to choose the protection and finish that best matches your needs - from basic clarity to advanced coatings for extra durability and comfort.

FAQ

What are bifocal lenses used for?

Bifocal lenses are designed to correct both near and distance vision in one pair of glasses, without needing to switch frames.

Can I use them all day?

Absolutely. They're made from lightweight materials for all-day comfort, whether you're reading, driving or working.

Are bifocal lenses good for beginners?

Yes. The clear separation between visual zones makes adaptation quick and intuitive, especially for those new to multifocal lenses.

Do they include blue light and UV protection?

Yes. They can be combined with SHMC, anti-reflective, and blue light protection coatings.
