

# Crystal Aspheric Lenses

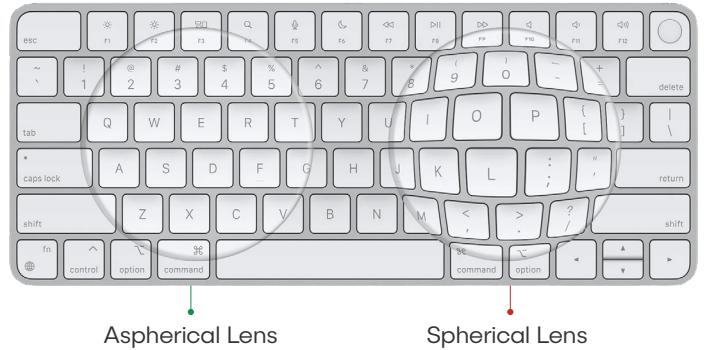

# Crystal Aspheric Lens

Aspheric lenses are specially crafted to provide a more natural and comfortable field of vision by minimizing visual distortion. They are particularly advantageous for individuals with higher prescriptions, as they make the lenses noticeably thinner and lighter. Unlike traditional spherical lenses, aspheric lenses feature a flatter surface that not only improves visual clarity across the entire lens but also enhances the cosmetic appearance of the glasses, resulting in a sleeker and more modern look.

## Sharper Vision **Less Distortion.**

Aspheric lenses preserve image clarity across the entire field of view by minimizing peripheral blur and reducing unwanted visual aberrations. Their advanced, flatter design helps maintain sharpness from edge to edge, ensuring that objects appear more natural, proportionate, and undistorted. This results in a more accurate and comfortable visual experience, especially for those with higher prescriptions who typically experience thicker, more curved lenses.

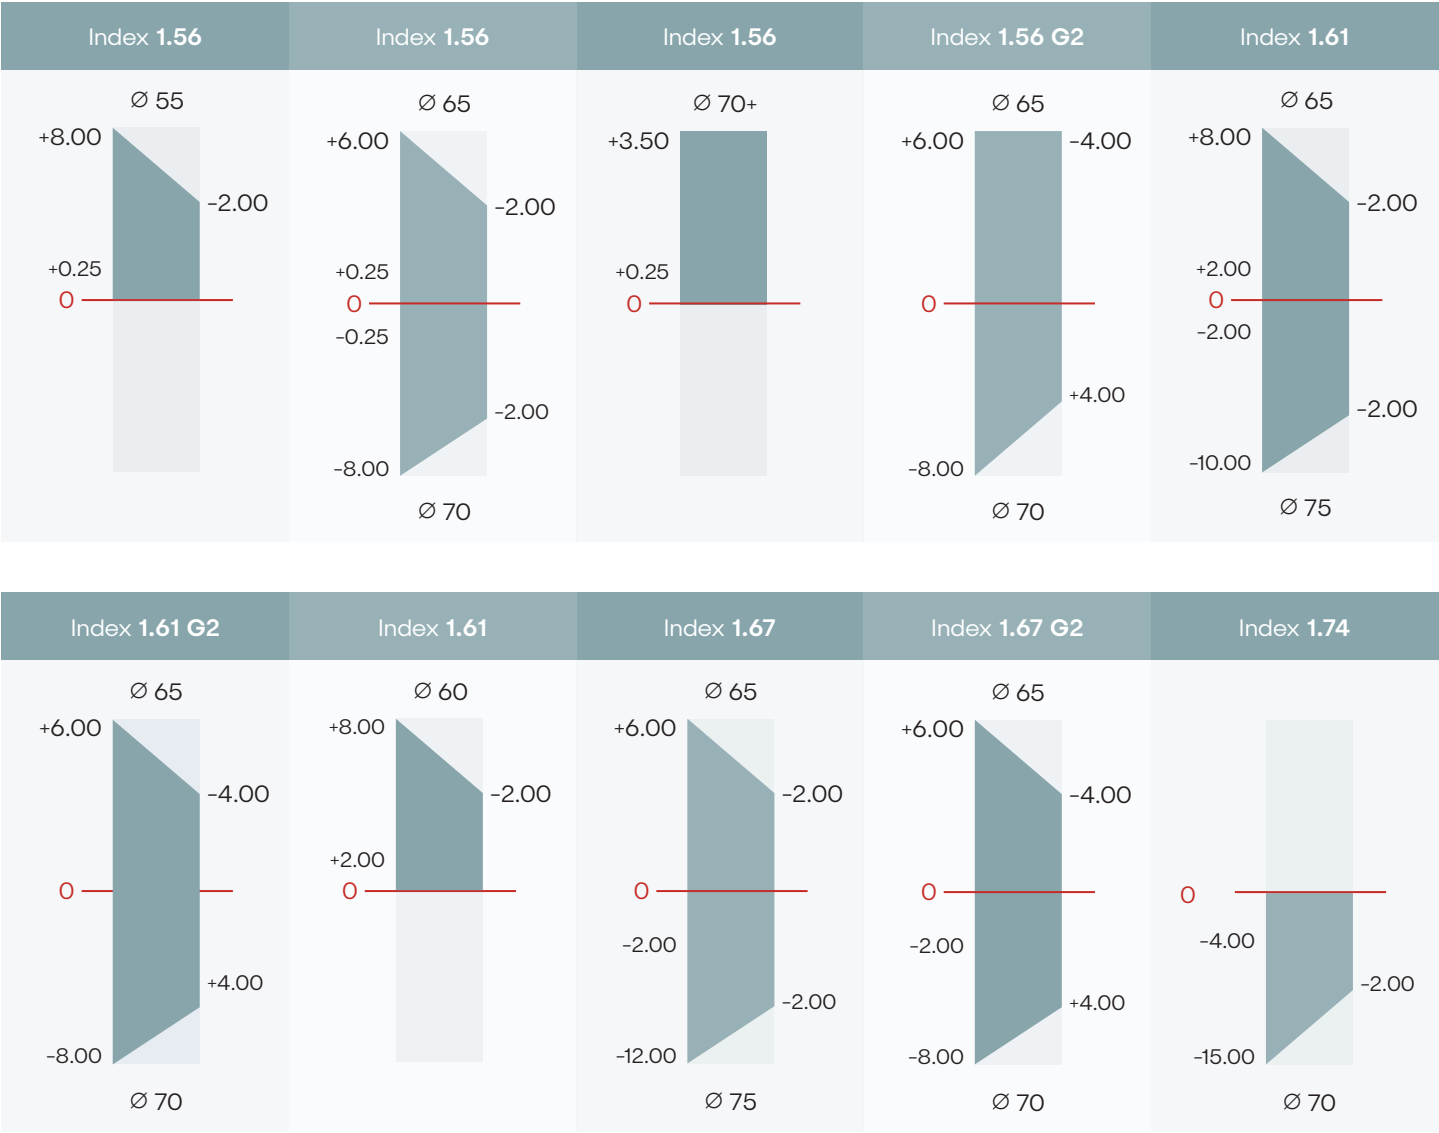

## UV 400 Super Hard Multi Coated

The UV 400 SHMC (Super Hard Multi Coated) coating provides complete protection against harmful UV rays, helping to maintain long-term eye health. In addition to shielding your eyes, it reduces glare, enhances visual clarity, and makes the lenses more resistant to scratches, smudges, and dust. This combination of protection and performance makes them an ideal choice for everyday use, offering a balance of comfort, clarity, and long-lasting durability.

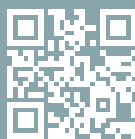

Feature	Aspheric Lens	Spheric Lens
Thin & lightweight	✓	✗
Reduced distortion	✓	✗
Natural appearance	✓	✗
UV protection (SHMC)	✓	Varies

## Clearer Vision with Super Hydrophobic Coating

The super hydrophobic coating repels water, oil, and dust, helping maintain clearer vision throughout the day. It also reduces reflections and glare from digital screens while protecting your eyes from harmful UV rays and environmental stressors.
